

Electronics Technicians Association, International (ETA)

GREEN ACADEMY PROGRAM

ETA International's *Green Academy Program* is a collaborative effort to promote synergy between schools, technical certifications and industry partnerships through job-ready training.

The *Green Academy* qualifying requirements are described below:

1. In order for a school to qualify as a *Green Academy* it should:
 - a. Have at least one of its training programs approved by ETA to teach at least a *Level One* certification in one of the ETA Renewable Energy disciplines (photovoltaic, small wind, micro hydro, fuel cells, solar thermal, geothermal, Stirling technology and solar concentration).
 - b. Have an agreement with an employer to provide part or all of its students either an internship or an externship.
2. The internship/externship must:
 - a. Be in the discipline for which the student achieved or will achieve the Level One ETA certification.
 - b. Be a minimum duration of 80 hours.
 - c. Have documented evidence in the format such as an official letter, diploma, or transcript provided by the school and verified by the employer. A grade of A, B, C, D, F or Pass/Fail must be given.
 - d. Provide all information to ETA at the conclusion of the internship/externship.
3. The internship/externship can be credit, continuing education units or contact hours.
4. A letter of agreement between the school and the employer must be made available to ETA, when necessary.
5. A school that has been approved as a *Green Academy* will be recognized on the ETA website for each approved discipline. For example, a school approved for two Renewable Energy programs, but having an employer agreement for only one will be listed as an approved school for one, and as a *Green Academy* for the other.
